

Frank Martino - Q2.5 Experimental Measurements and Personal Instrumentation

Prove your skill set using ONE of the following: M1K board, Analog Discovery Board, or M2K board.

Q2.5 Using cursors to find/show specific voltages and time points

I can use my cursor function to show specific voltage and time points.

As shown in the image below, I was able to mark specific points which were circled in red for emphasis on the graph such as 1, 2, 3, 4, and 5. Each point has a different voltage value and time value as shown in the legend at the top left hand corner of the picture. (x-axis and y-axis stretched to allow for easier reading, and line thickness increased to 3 pixels on graph presented below)
