

Q1.2 Talk to each other!

1 Point

I can HELP someone else OR ask another student for help after I have mastered a skill.

Who did you speak to? (yes you need a name!)

I helped and spoke to Philip Okafor.

What did you talk about?

I was able to help other members after mastering a skill, specifically in the personal instrumentation section. Both another student and I were using the ADALM2000, and after learning some features that Scopy had, I shared them to make the lab go much smoother as this was his first time using Scopy and the ADALM2000. In particular, Scopy has the ability to create waveforms beyond just standard constant voltages, such as a dropdown menu for sinusoidal, pulses, triangle, and customizable waves that the user can input a math equation for. I also talked about how to change the color of the background in Scopy and thickness of the lines. While some of these may seem trivial as they are just apart of the program this was his first time using the software and board.
