

Q1.4 Help improve the Skills document

1 Point

I add new information, add a comment or make a correction to the Intro to ECSE Skills documentation in a meaningful way for future semesters.

Please write a short description of what you added.

I added a comment in the the circuit simulation section, where I discussed ways to be more efficient and save time in LTspice. I mainly discussed key board shortcuts which I personally have found very helpful. Typing a V creates a voltage source, R makes a resistor, C makes a capacitor, L makes an inductor, G creates a ground, etc. This is much faster then having to click on the components directory and search for parts especially when alternating between a few components for one circuit.
